

SureCalf® Terms and Conditions

SureCalf is a certified pre-conditioning programme aimed at minimising the impact of Bovine Respiratory Disease (BRD) and improving the welfare of calves going through the markets. SureCalf aims to help sellers, who invest in vaccinating against BRD pre-sale, increase the value of their calves at market, and helps buyers by protecting the health of the cattle they are buying.

1. Eligible animals for SureCalf certification are calves that have received a single intranasal dose of Rispoval RS+Pi3 IntraNasal and single intra-muscular dose of Rispoval IBR-Marker live.
2. The product licence for Rispoval RS+Pi3 IntraNasal allows administration to calves from 9 days of age, however under the SureCalf programme calves must at least be 3 months of age on receipt of this vaccine.
3. Calves must at least be 3 months of age on receipt of the Rispoval IBR-Marker live vaccine.
4. The required vaccines must be administered by the Seller no less than 2 weeks and no more than 4 weeks prior to the date of intended sale.
5. As no information is available on the safety and efficacy of Rispoval RS+Pi3 IntraNasal or Rispoval IBR-Marker live when used with any other veterinary medicine, and these vaccines are not specifically licensed for concurrent use, a decision to use one vaccine before or after any other needs to be made on a case-by-case basis. Therefore, in accordance with the product SPC, veterinary advice should be sought regarding the timings of administration of each vaccine in relation to the other.
6. The certification is not an offer or implied offer of insurance or indemnity against any disease. Vaccination is not a guarantee that animals will be protected from disease.
7. Zoetis reserves the right to request biological samples to confirm vaccination of enrolled animals has taken place and will reimburse associated veterinary and laboratory fees.
8. Zoetis will not be held liable for any alleged or apparent shortcomings in the vaccination procedure or technique of any Seller or for the incorrect storage of vaccine intended for use or subsequently used by the Seller.
9. Zoetis offers no guarantee that any individual Seller has completed the Programme appropriately. The certified declaration is the Seller's assurance to the buyer that the Programme requirements have been complied with. Zoetis does not guarantee any commercial benefit for the Seller by the Programme.
10. Zoetis will not be liable for any costs incurred by a Seller where animals are subsequently found to be ineligible for enrolment. For example, but not exclusively, ineligibility may be due to inappropriate age of the animals at the time of vaccination or if vaccination has taken place less than 2 weeks or more than 4 weeks prior to sale.
11. For technical queries Zoetis vaccine usage phone 01 2569800.
12. Zoetis will not be involved or mediate where disputes arise between third parties.

Rispoval® IBR-Marker live contains Bovine Herpes Virus type 1 (BHV-1), strain Difivac (gE-negative), modified live (attenuated) virus. Rispoval® 3 contains modified live Bovine Pi3 virus and BRSV, with liquid fraction containing inactivated BVD virus type 1. Rispoval® RS+Pi3 IntraNasal contains modified live Bovine Pi3 virus and BRSV. Legal Category: POM(E)
